

Trick Reaching BEP and play with crypto POS

Same as always no graphic since linux....here we go

1. Need cryptopia account
2. ispace account
3. cryptoguru account
4. calculator for coins pos[not rec sometimes not accurate]

Step :

1. login to cryptopia and see trand mark on ispace. What coin higher stakes.
2. try trade coin if have[if no try faucet and sell coin] and put 1 high price stake. If not move fast. Leave then we will do by later
3. see trand mark low but not lowest coin price with potential 1 days we coumpound will faster. Example chess.
4. after found path for chess and if 1 day chess got 5 or more then you can safe Withdraw
5. rotate this everday. Or by time compound.
6. then open up the big after small stakes. Like beez coin[this price coin stable] and put there and keep circulation of compound chess.
7. see cryptoguru potential high price coin too add more sword[like in game]. Like GRS, IXC, etc...
8. circulate sell if they not worth as pos. then that coin can be sacrifice. Big coin will have more price higher. THEN compound again to beez. After that beez keep on and stop now for chess comsumption as make them base BEP[Break Event Point]. This make for your future invesment for whole year
9. then after that keep compound for beez and if beez reach BEP then you can do withdraw. You can buy anything. Btw, I ever try this and cuz that beez I have 5 bitcoin. This after I forgot OK cash shit
10. BEP found why not small invesment after sell beez when you “ngaso” or “relax time”. You can invest on small but will big impact like bitbean, cream,etc.

Happy Mining Pos
