## BAB 1 - Install Linux

## Bagaimana cara buat koin

Reference: Hatta Yuthafiga | Translator: Refa | Specialist Coin: Yuka Yuthafiga

# Apa yang dibutuhkan?

- Mengenal dasar koin
- Programming skill
- Design skill
- Network skill
- Kernel skill

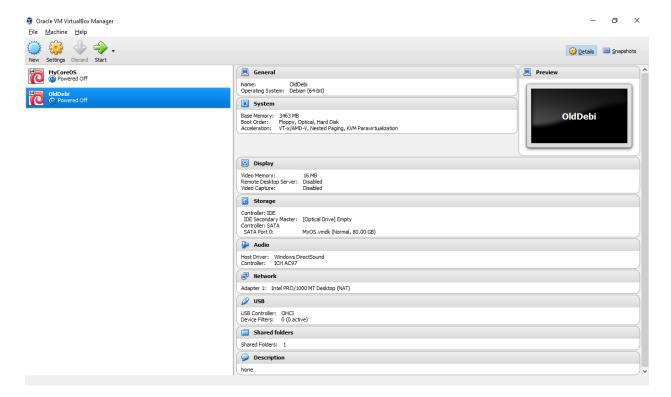

Semua gak bisa dikuasai jadi butuh tim khusus

## Persiapan Awal

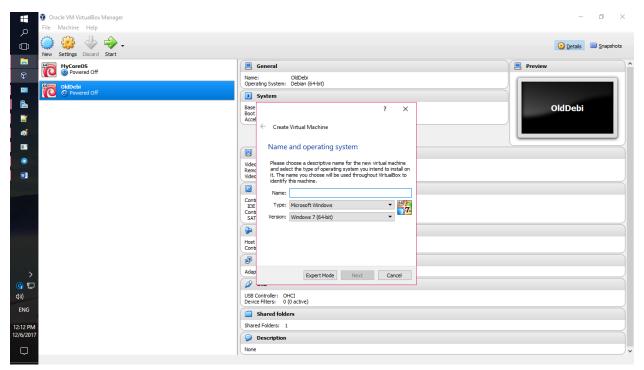

- Virtual Box atau dikenal Vbox. Karena programming gak selama melulu di linux jadi butuh hiburan<waduh kakak>
- OS Debian 8[karena basic core gampang di costume]
- Mental dan fisik jangan lupa makan~

#### Install vbox

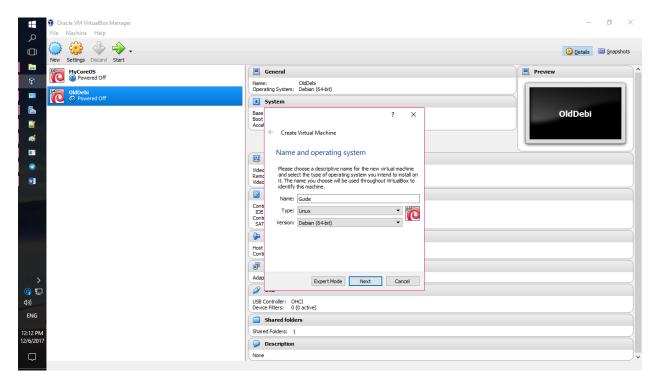

- Cari google virtualbox punya oracle...eits jangan salah barkley db yang ntar ente pada install adalah produk oracle. So applause buat mereka
- Mari install virtualbox[gampang next-next aja]. Kalo costume bisa misal ente males pindahin files backup kerjaan dilinux.
- Buka virtual box

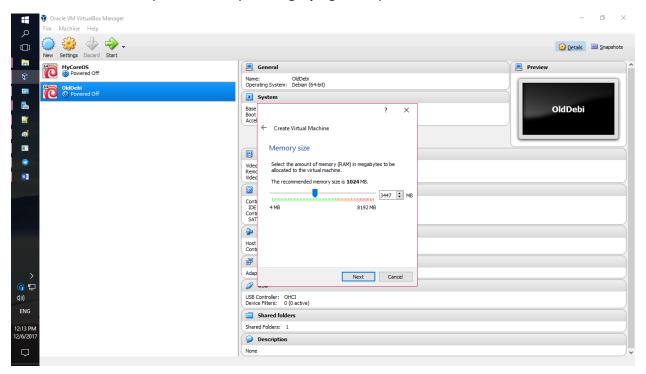

- Tampilan dulu jadul gak gini malah console salut<weee>. Oke add new virtual yak

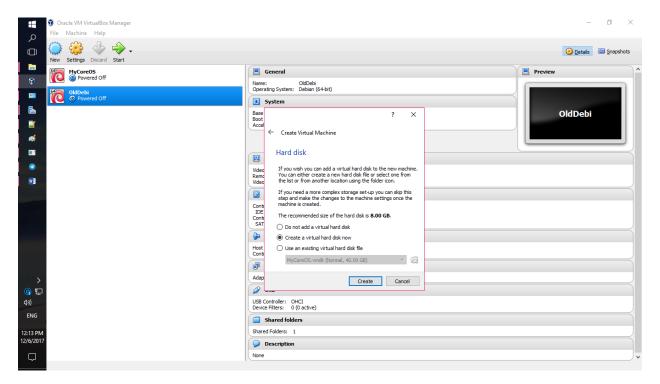

Beri nama bebas setting seperti ini

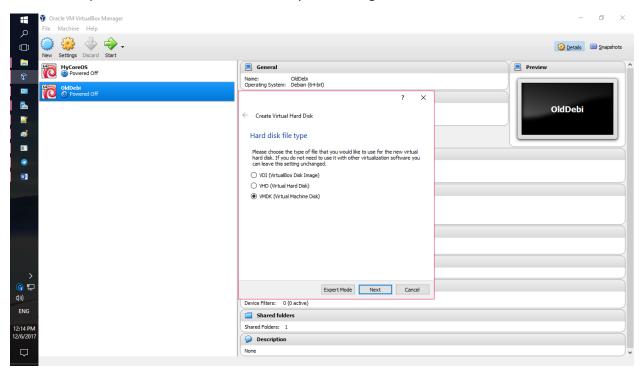

- Next disini berapa ram mau dipakai. Ingat jangan sampe merah. Crash

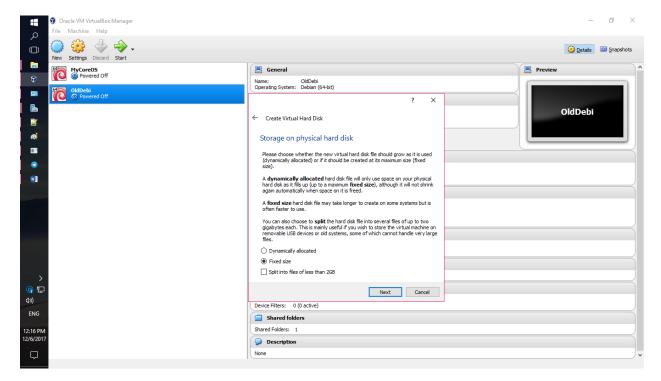

- Buat baru apa enggak atau kamu buka os lama dengan costume

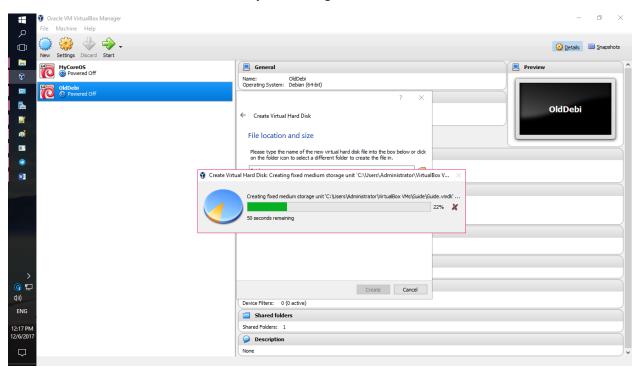

- Next pilih vmdk. Karena mudah di backup dan biasa gak crash

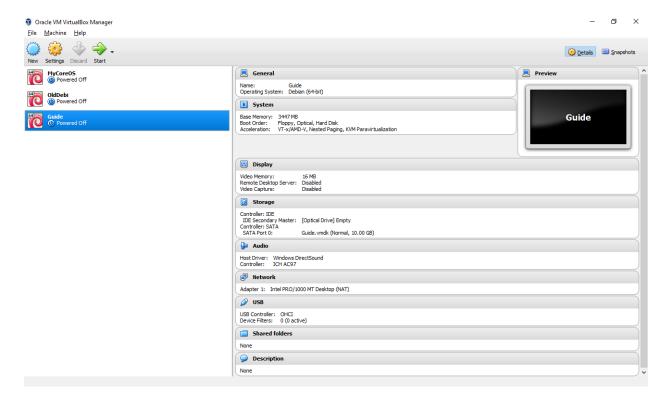

- Pilih dynamic apa kagak. So saya pilih fixed<weee>

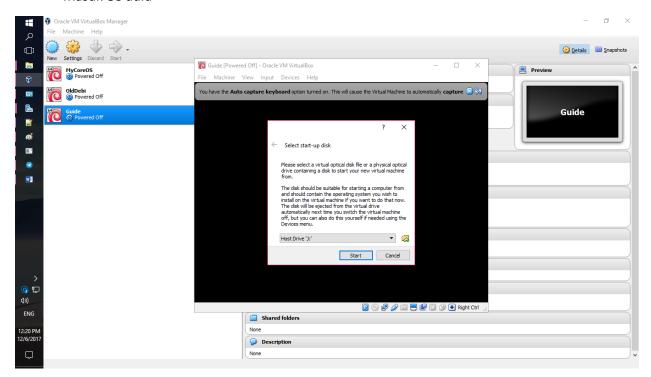

- Untuk tutor bisa 10 GB karena lanjut ke debug kan~

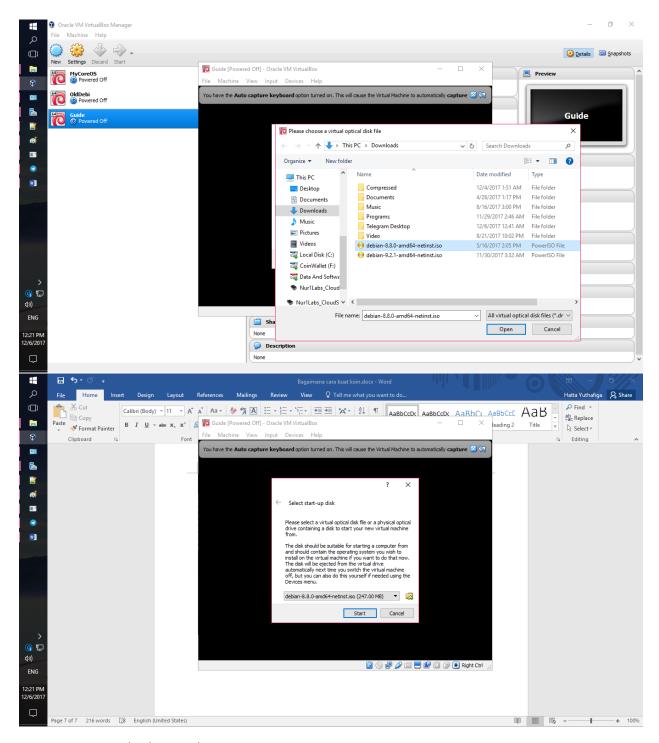

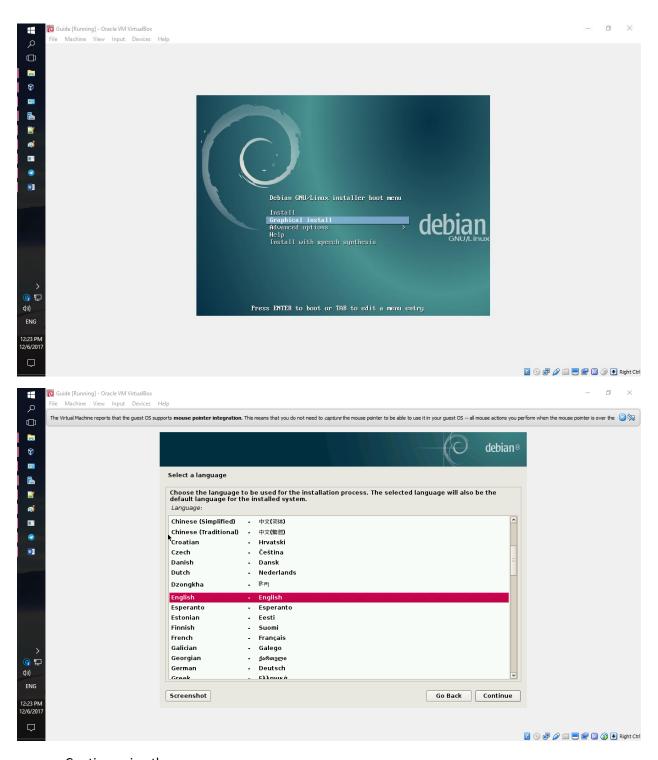

- Masuk OS dulu

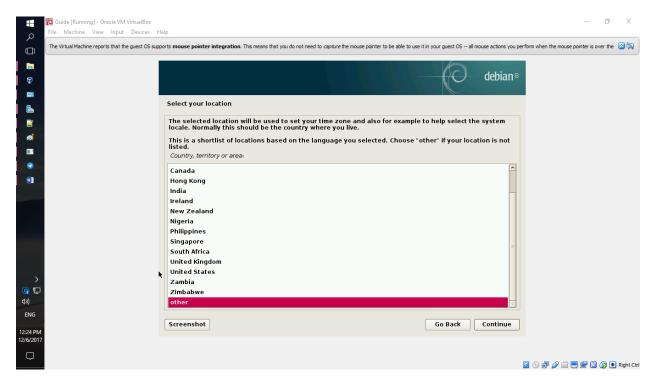

- Pilih browse cari iso yak

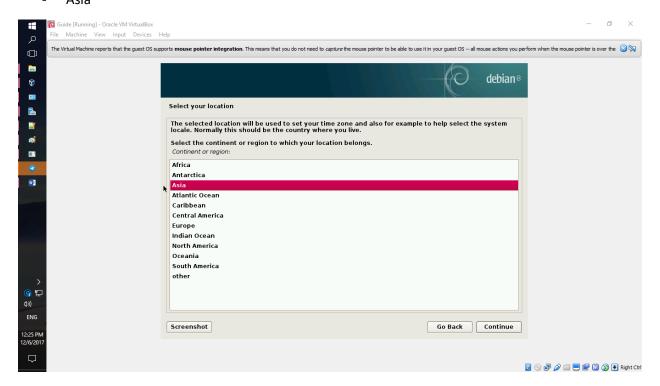

- Start Graphic biar enak

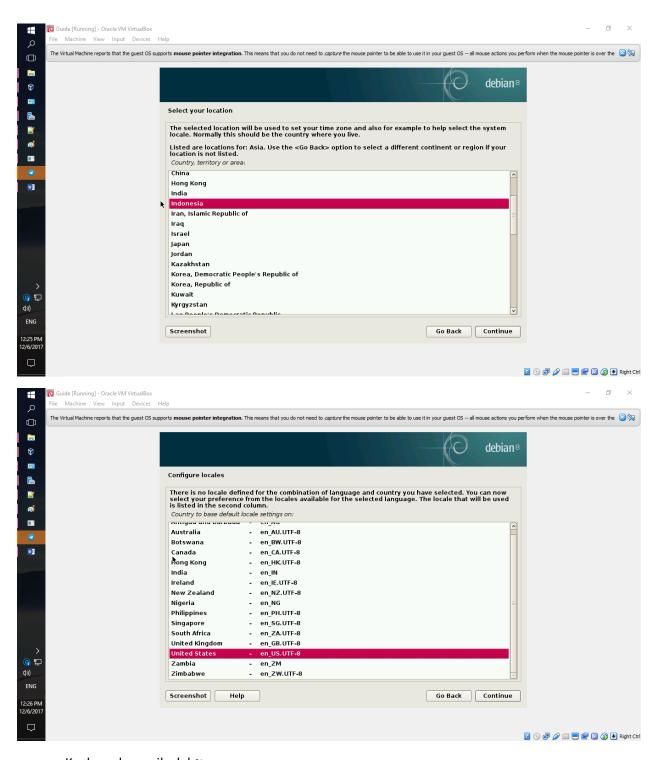

- Continue aja other

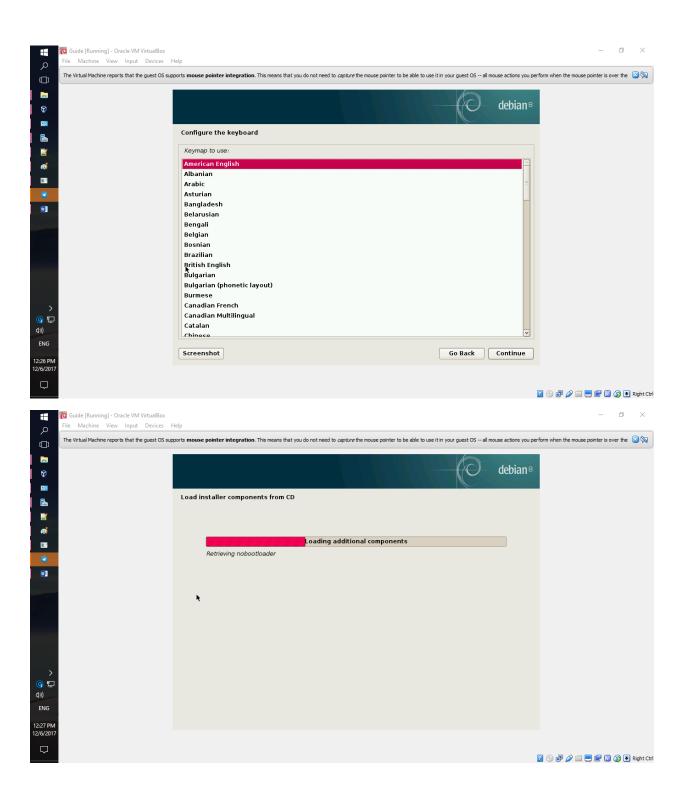

Asia

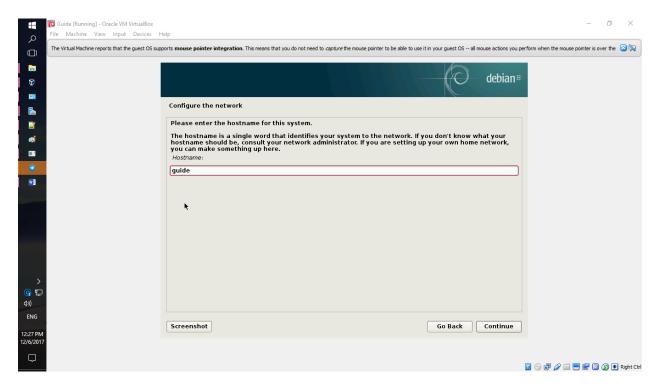

- Indonesia. <original sih jepun>

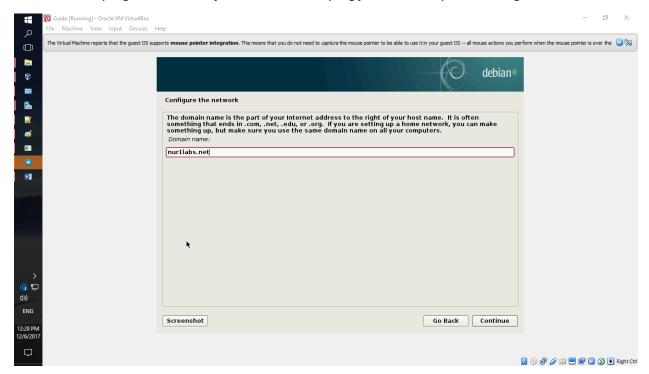

- Keyboard amerika lah~

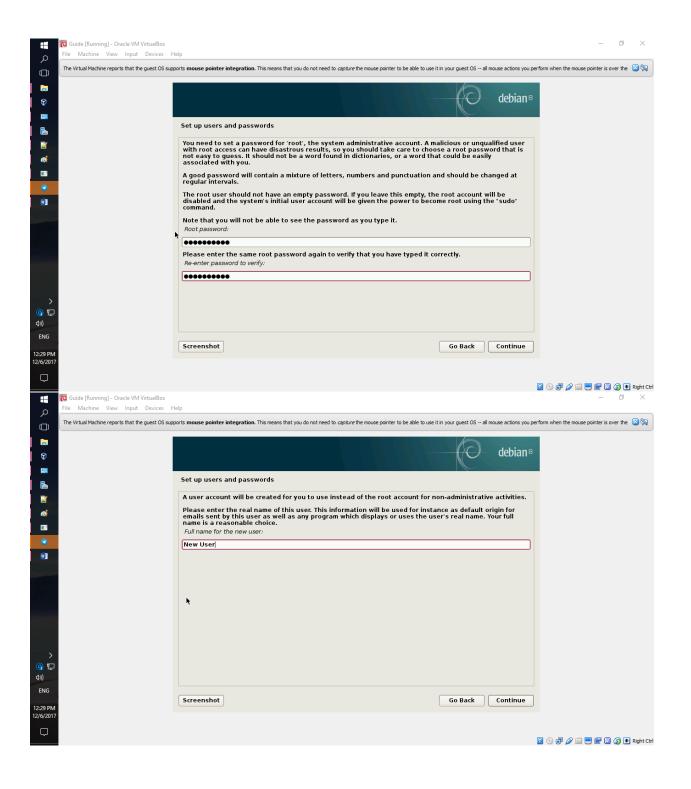

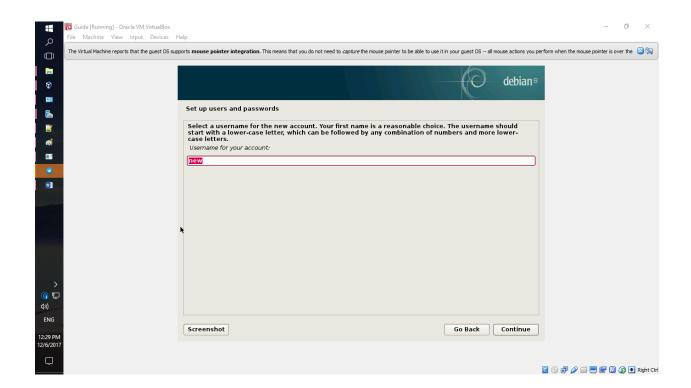

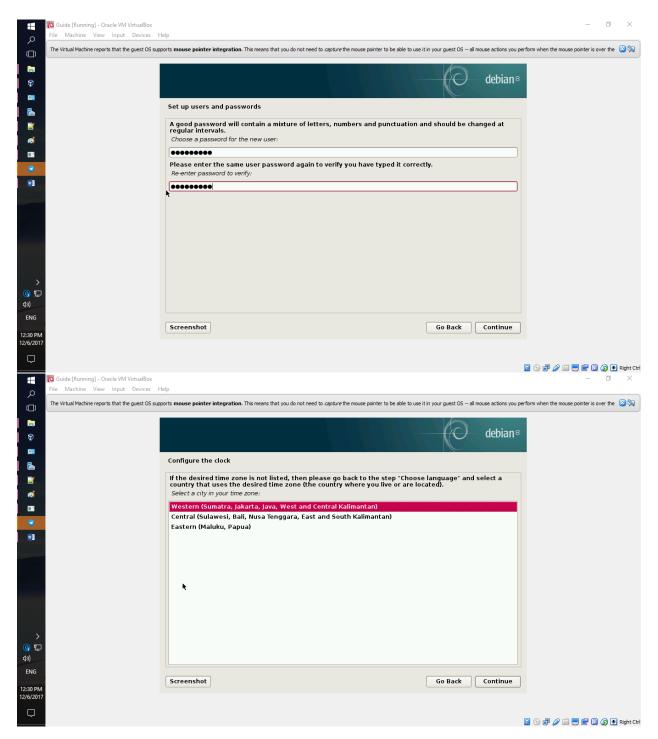

- Bebas yang diatas. Males jelasin next<kakak yang jahat. Next saya ikuti mungkin buat ikutin>.

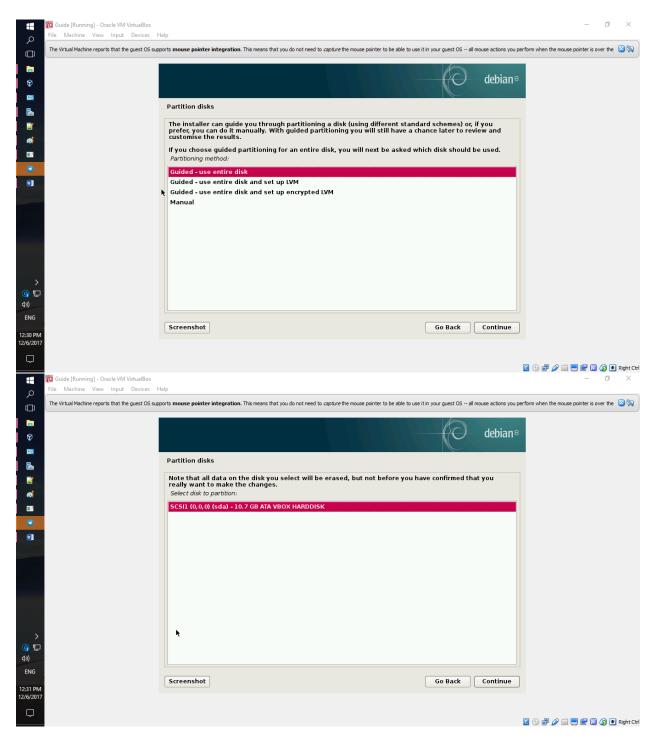

- Lanjut isi aja

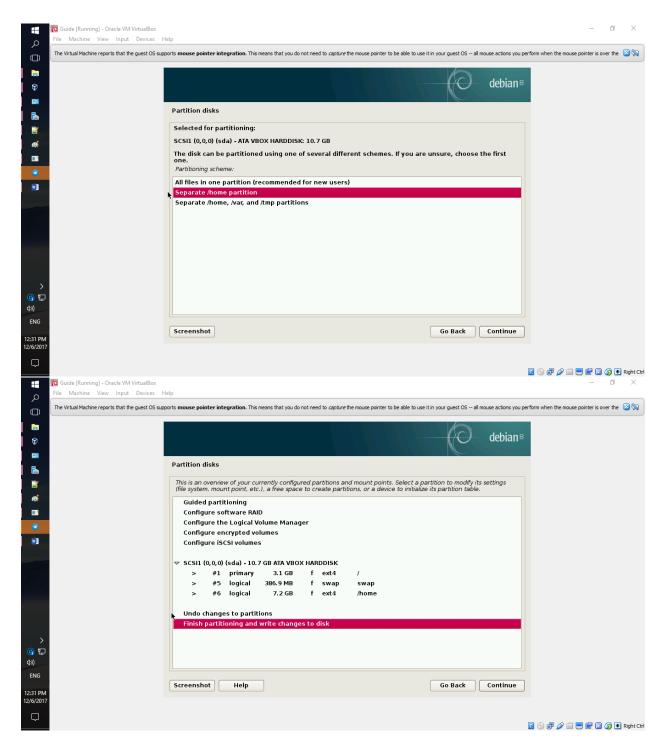

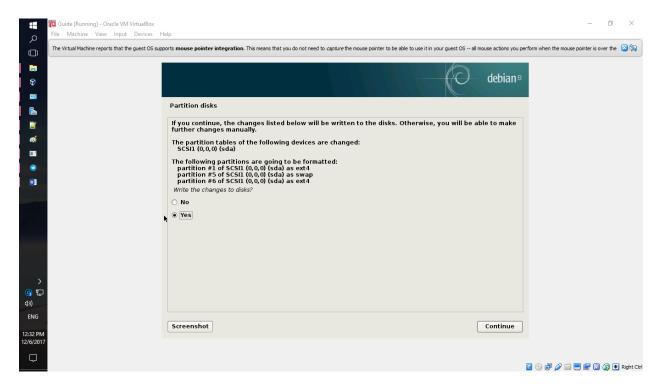

- Pilih atas

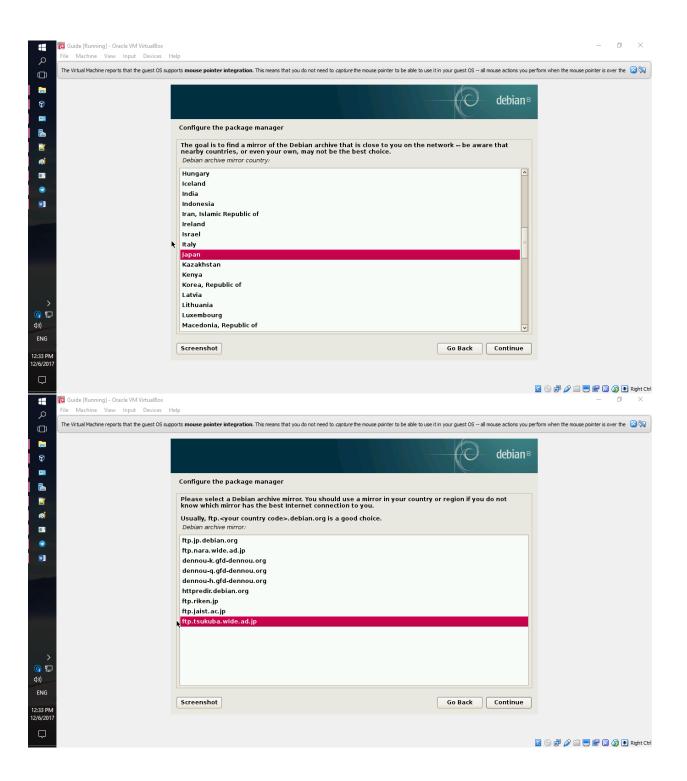

- Pilih bawah biar gak kecampur

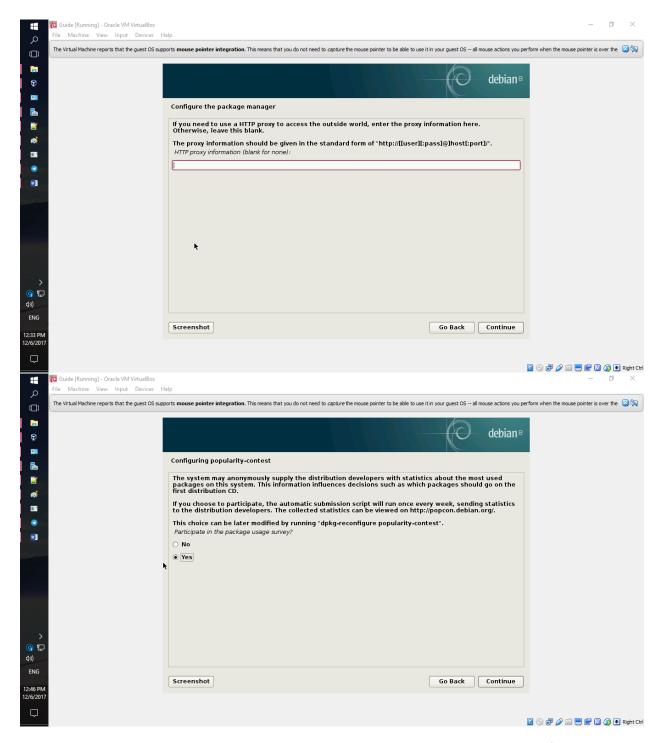

Yes

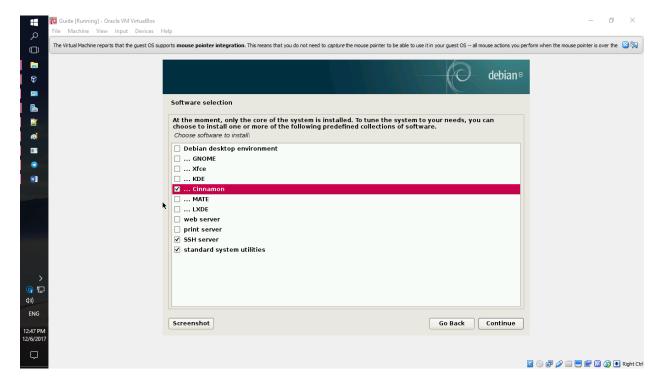

- Ngikut aja

- Ini penting. Coin sendiri butuh jaringan. So nyalakan SSH<waduh saya kagak maaf kak. reinstall>

- Continue. Selamat menggunakan
